

SOLAR CELLS HELLAS GROUP

Greece was one of the pioneers in the installation of solar thermal and recently everybody is ambitious for PV future in the country. Solar Cells Hellas Group showed the way three years ago; without doubt that success is underway the company invested 120 mio € for the industrial production of crystalline wafers, cells and modules in Greece, with a total annual capacity of 80MWp. This integrated production site provided enough flexibility during the difficult financial crisis. In order to ensure that high quality standard is transferred to the end customer the company is now offering turn-key solutions for pv parks. Additionally, Mr Panagakos, owner of the group, is also developing its own solar plants in Greece. "We see ourselves not only as responsible suppliers but also as a reliable partner for the future", say Sofoklis Pitarokilis, General Manager. Other activities include energy saving projects, professional consultancy services, technical assistant and R&D in collaboration with universities and research institutes. This complete solar portfolio with more than 170 employees in its core business areas makes Solar Cells Hellas Group a leader player of the pv field in SE Europe.
