

Open to the future of Energy!

- **Wafer, cell, module production**
- **State-of-the-art equipment**
- **Know-how**
- **High quality (ISO certification)**
- **Turn-key solutions**

Solar Cells Hellas Group is the first vertically integrated producer in SE Europe, producing multicrystalline ingots, wafers and cells with a capacity of 30MWp, which will be doubled to 60MWp by the end of the year. In the third quarter of 2009 module production is also scheduled to begin, with a 220-230Wp module type at a capacity of 40MWp. The priority market for the modules is Greece and other markets in its vicinity (Turkey, Bulgaria, Romania etc.), while the excess cell and wafer production is exported to module producers in other countries.

The Group is also active in the design, installation, operation and maintenance of PV systems in Greece and is investing in its own technology by developing solar plants. Its aim is to become a major, vertically integrated player in the PV industry primarily in Greece enjoying also a strong international presence.
